

IT'S ALL ABOUT Sleep and Dreams

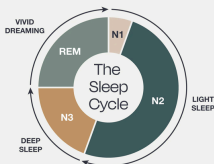

DREAMS

Dreams are stories and images our minds create while we sleep. It often reflects our thoughts, emotions, and experiences from waking life.

TYPES OF DREAMS???

Normal dreams are everyday stories created by the mind during sleep, while lucid dreams involve awareness and possible control of the dream.

How do Lucid Dreams Occur?

Lucid dreams occur when self-awareness emerges during REM sleep, enabling conscious thought within the dream state.

What Keeps People From Remembering Their Dreams?

Forgetting Our Dreams?

Dreams are often forgotten because the brain areas responsible for memory formation are less active during REM sleep.

COMMON THEMES

Falling

Being chased

Flying

Teeth falling out

FUN FACTS

- People are physically paralysed during REM sleep
